

Date	Action	Reason/Steps taken.	Expected Outcome	Actual Outcome
15/03	Added basic framework	Needed a starting point.	Nothing	Code had no execution
16/03	Removed class framework. Added Inputs for name and meal amounts.	Creating a menu class was unneeded with my additions. Inputs were needed to allow the user to have a say in their orders	Name and amount saved as variables	Name and amount were saved as variables.
22/03	Created the function to get options. After trialing I placed this function within the print meal function.	It was simpler to place the function there because the information was easily accessible and didn't need to be returned out of functions.	Being able to select an option from a list provided	Single option was able to be selected.
22/03	Added price checker		Price from order and options would be returned	Price from order was returned but the options were not taking effect.
23/03	Trialed solutions to allow for multiple orders to be picked	In a real restaurant you can have multiple options	Multiple options could be selected	Single option selected.
24/03	Tried to fix multiple options being selected correctly	After testing I found a way to allow multiple options to be selected through a list.	Multiple options would be saved to a list and then returned.	Successful, however, still had a bug where once all options were chosen it would loop indefinitely.
4/04	Fixed the bug above by fixing some smaller errors. I	To fix the bug while adding further security and strength	All options be outputted	Successfully outputted options.

	corrected an if statement being incorrect while also improving the rest of verification			
13/04	Fixed an error in which the wrong option was being selected and could break the code if the last option was selected.		Option would choose the correct corresponding number in a list.	Successfully fixed the code by adding a -1 to each option number
21/04	Dietary Requirements added	Upon inspection realised they were missing.	To be able to see dietary requirements clearly	Successful.
21/04	Added additional items to order post completion.		To have an option once the order is completed to resume the order while having all current items present.	Successful after several errors and fixes.
